# Outlook

Open another mailbox while working in webmail.

## Before you begin

The following instruction is supported by the TU Delft and has been tested to be working. However, we offer this manual to you as an extra service. In case you have a configuration or version of **Outlook** other than the one described here and you have problems **setting up a shared email inbox**, neither ICT nor a Servicepoint will be able to help you to **set up a shared email inbox**.

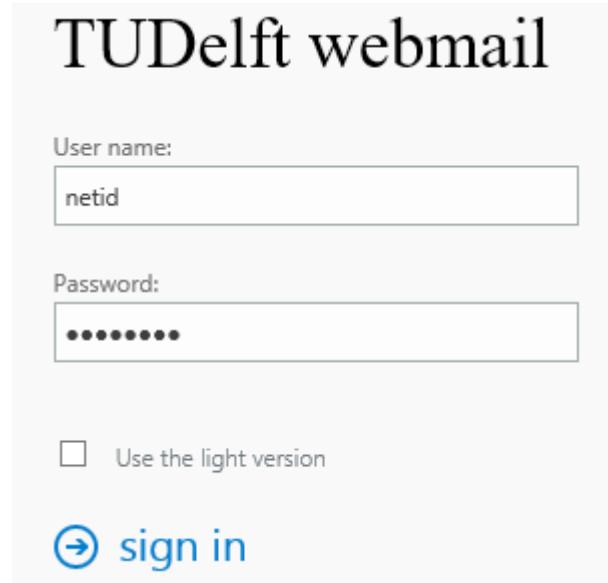

## Prerequisites

In order to **set up a shared email inbox**, make sure that you have the necessary access to that inbox.

## Open another mailbox when working in webmail

Step 1. Start a web browser and go to <https://webmail.tudelft.nl>

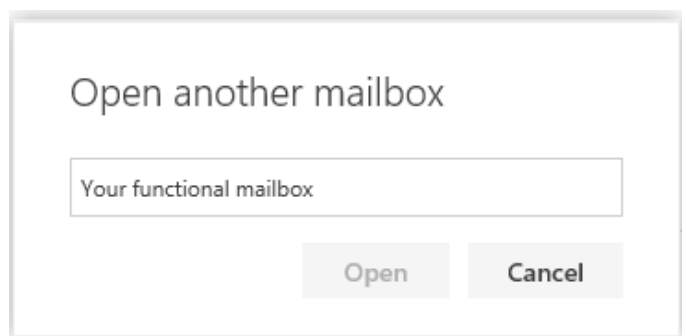

Step 2. Fill in your User name (NetID) and belonging Password and click "Sign in"

## Open a "Functional Mailbox"

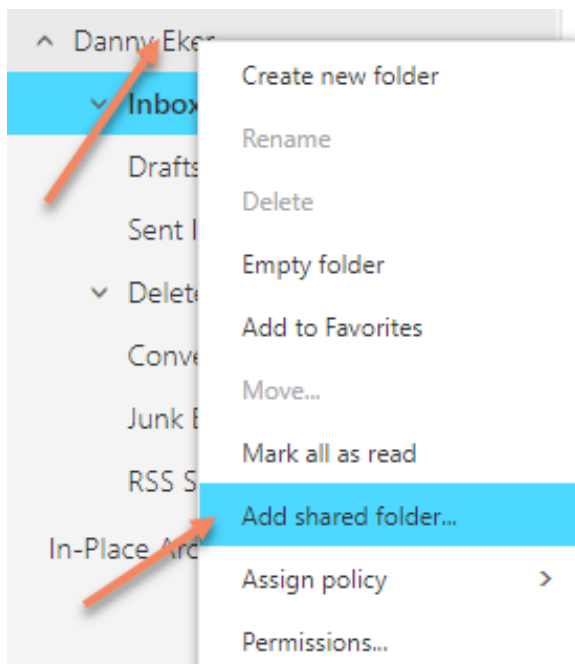

Step 3. Click on the round picture place logo on the upper right corner and choose "Open another mailbox"

Step 4. Fill in the name of the functional mailbox and click open, the functional mailbox will open.

## Open the mailbox of another user

Step 5. Right-click your name in the left side of the screen, a drop-down menu will open. Choose *Add shared folder*.

Step 6. Type the name or mail address of the user and click *Add*. The folders you have access permissions on will show.
