Configuring the Outlook app on iOS 13

Use this manual to configure a mailbox on an iOS device such as an Ipad or Iphone using the Outlook app.

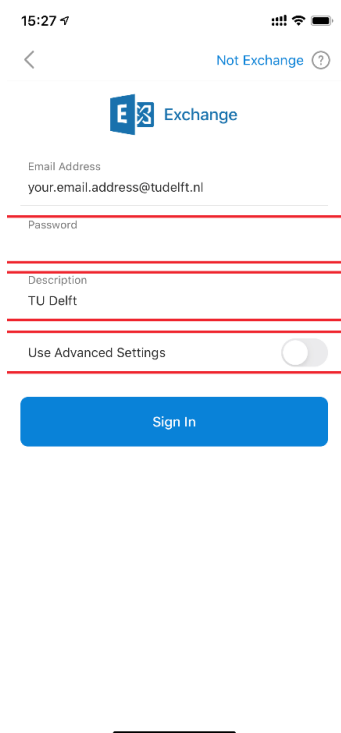

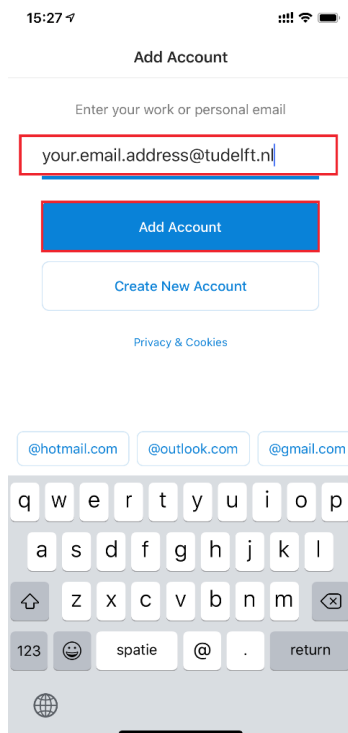

Before you begin

The following instructions are supported by TU Delft and have been tested to be working. We are offering this manual to you as an extra service. In the event you have a different configuration or version of iOS to the one described here and you have problems connecting, we advise you to contact your nearest Service Desk, Student IT Desk (SID) or Workstation services (WPS).

Description of the steps that have to be taken

Step 1. Install the **Outlook** app. Open the app, enter your **TU Delft email address** and tap **Add account**.

Step 2. Enter your TU Delft password and choose a description for your mailbox. Then tap the **Use Advanced Settings** box.

Step 3. The Server will be filled in automatically. Enter the Domain **tudelft.net** and the Username **netid@tudelft.net**. Then tap **Sign In**.

Step 4. Tap **Maybe Later** for now. Choose your preferences on the Notification pop-ups. Your account will now sync, this may take some time
