# Installing VPN on OSX

Installing VPN using FortiClient VPN on your Max OSX 10.14 or 10.15 device

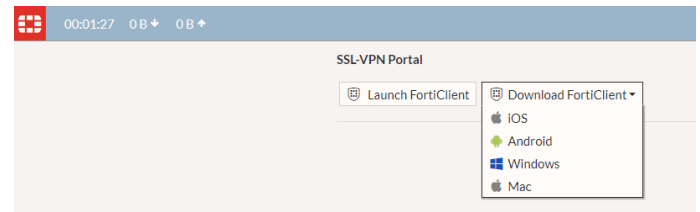

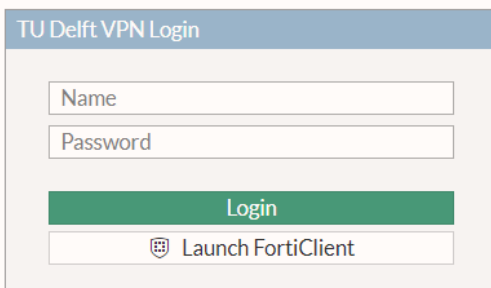

## Before you begin

The following instruction is supported by the TU Delft and has been tested to be working. However, we offer this manual to you as an extra service, so in case you have a configuration or version of OSX other than the one described here and you have problems establishing a connection, neither ICT nor a Servicepoint will be able to help you to make a successful connection.

## Installing the FortiClient app

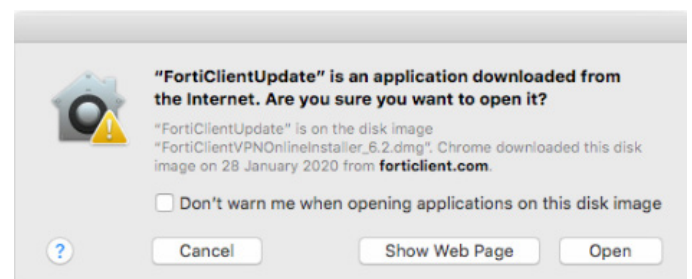

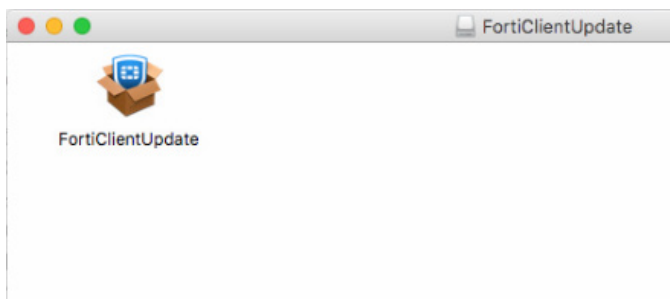

Step 1: Open Internet Explorer, Chrome or Firefox and go to <http://vpn.tudelft.nl> Log in with your NetID and password.

Step 2: Select your operating system (in this case: Mac) and download the software package.

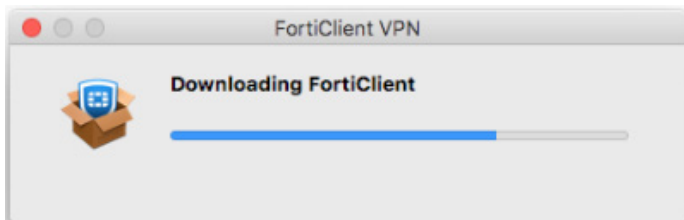

Step 3: After downloading the package, open the application.

Step 4: Open the package and press 'Open'.

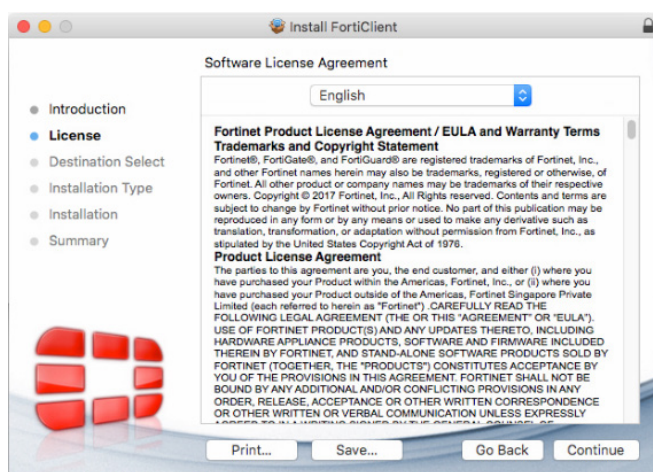

Step 5: The FortiClient is downloading...

Step 6: After the client finished downloading, press 'Install'.

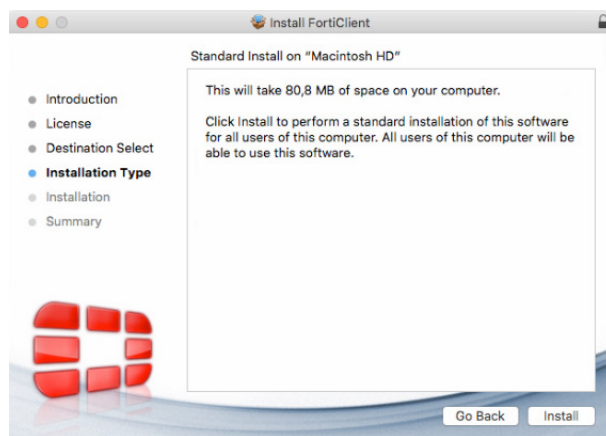

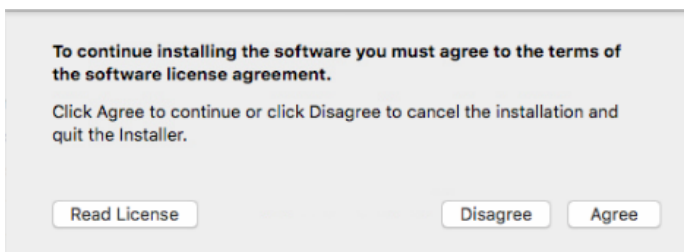

Step 7: Read the instructions appearing on the screen and press 'Continue'.

Step 8: Read the Software License Agreement (If you like) and press 'Continue'.

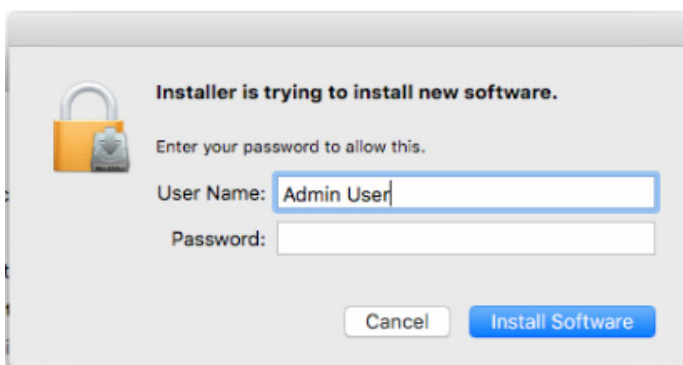

Step 9: Select 'Agree' to continue.

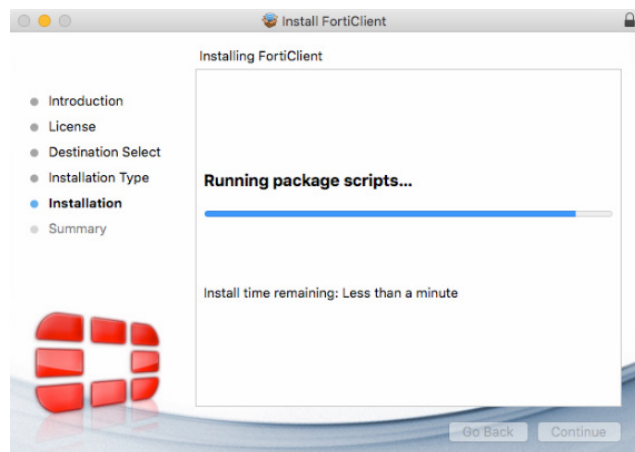

Step 10: Read the message and press 'Install'.

Step 11: Fill in your username and password (of the account on your Mac-device) to continue.

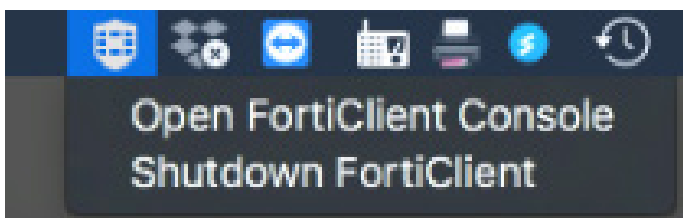

Step 12: Let the installation run until the installation is finished and FortiClient has been installed successfully.

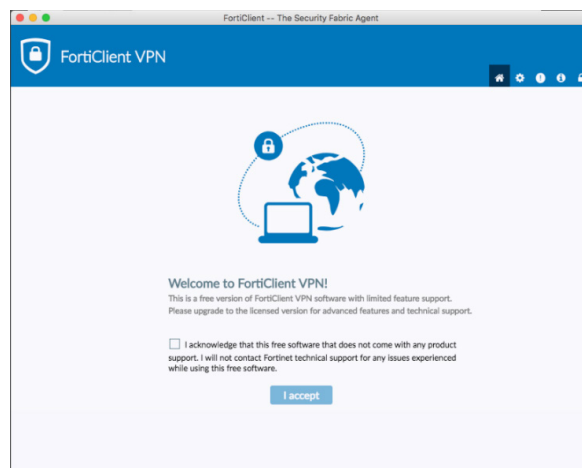

## Configuring the VPN Client

Step 1: Click on the newly installed FortiClient icon and select 'Open FortiClient Console'.

Step 2: The welcome screen appears. Select the checkbox and click 'I accept'.

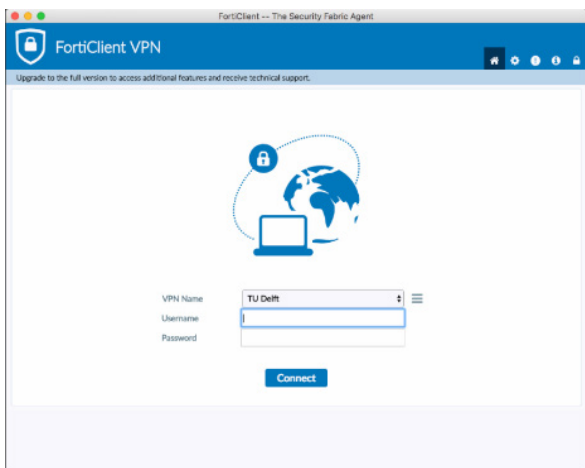

Step 3: The next screen appears. Click on 'Configure VPN'.

Step 4: Fill in the entries as given: select the entry **SSL-VPN**, give the connection a logical name e.g. TU Delft VPN. Fill in the remote gateway: **vpn.tudelft.nl**. The port must not be customized. Select the checkbox **Prompt on login**. Finally, click on 'Save'.

Step 5: The login screen appears. Select (if not already filled in) the VPN connection name from step 4. Log in using your NetID as username (**no @ tudelft.nl** needed) and the corresponding password, and select 'Connect'.

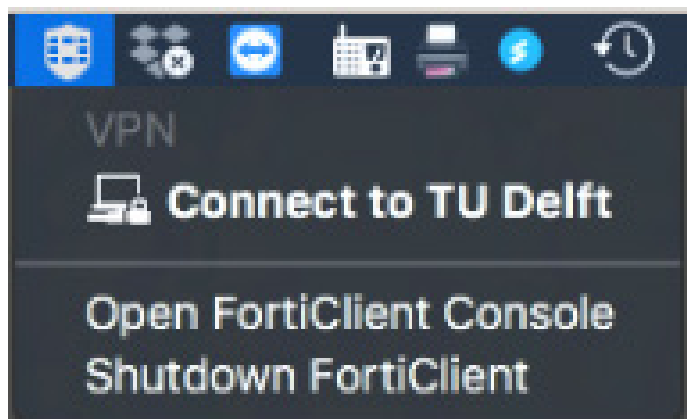

Step 6: After this, the connection is established.

### Starting a VPN connection

Step 1: Find the shortcut icon of FortiClient in the status bar.

Step 2: Select 'Connect to ...' (where the dots are your connection name). When the login screen appears, fill in your username and password and press 'Connect'.
