

# Architectural Design Crossovers

MSc2 Design Studio – Architecture & Urban Design

Image by Yuqing Mao

Spring Semester 2022

## Tutors

Roberto Cavallo (Architecture)  
Maurice Harteveld (Urban Design)

Agnes van der Meij (Architecture)  
Robbert-Jan van der Veen (U. Design)  
Steven Steenbruggen (Architecture)  
Victor Muñoz Sanz (Urban Design)

Code	AR0167
Credits	15 ECTS
Location	Rotterdam and another Dutch city
Excursion	Yes (if conditions in 2021–Q4 allow)
Costs	-
Project type	Multidisciplinary
Approved Master 2	Yes
Architecture design project	

GROUP OF ARCHITECTURAL DESIGN CROSSOVERS

Chair of Urban Design

TU Delft | Deltas, Infrastructures & Mobility Initiative

Massive urbanisation puts pressure on public space and demands a variety of forms of collective spaces that cannot be planned in advance. Mobility and public life manifest themselves in various forms as carriers of urban development. Interventions in the city need constantly to be grounded on sharp design approaches in order to respond adequately to the necessities of our times. This design studio is about city making at times of transitions.

Designs will envision how to work with continuously changing urban conditions: how mobility transforms the city and public space can take various forms, how programmes hybridise, and how the underground relates to the above ground.

In this interdisciplinary design studio, you combine these issues and present them to your peers and a team of interdisciplinary supervisors. You focus particularly on the consequences of urbanization for the major foundations of the city of the future—urban infrastructure and public space—and you envision an experimental design, within a larger set of visions produced by your fellow students.

In this course, students and staff are interested on one hand to the urban intervention in the built environment and its effect on architecture. And at the other hand, on the basis of particularly the cross-section, at the architectural treatment of the city and its effect on the context of the urban fabric and landscape.

This course is open to students of the Master's degree programmes in Architecture, Urban Design and Landscape Architecture. If you are in a different programme: please consult the coordinators before enrolling.

*Students in this studio will interact with a BNA (Royal Institute of Dutch Architects) and DIMI (Delft Deltas, Infrastructures & Mobility Initiative) project, involving also professionals from various fields.*
