# LDE minor Responsible Innovation

The minor Responsible Innovation is a unique collaboration between Leiden University, Delft University of Technology, and Erasmus University Rotterdam. This joint minor offers in-depth insight into how responsible innovation can be accomplished and promoted. The students and teachers come from different universities and bring with them specific knowledge and perspectives from their field of specialization. This way, students will develop broad theoretical and practical expertise on responsible innovation.

## The minor

During this minor you will be introduced to the technical, managerial, and socio-economic principles that govern innovation, and discuss ethical, moral, and cultural conditions for innovating responsibly. You will learn how responsible innovation can be defined and analysed; how it can be done and managed at the level of a project team, of a company, and of an entire economic system; and how responsibility can be promoted and irresponsible innovation avoided. In a real-life case of innovation, you will learn to work on these issues in a multidisciplinary team.

## For whom?

Are you interested in working together with students from various disciplines from Delft, Rotterdam, and Leiden and do you think that people, planet, and profit should be taken into account during innovation? If so, this English-speaking minor could be right for you!

The following common features describe our target group: *Societal conscious*: you have a vision to understand dilemmas in responsible innovation; *Entrepreneurial spirit*: you are open minded with a flexible and proactive attitude; *Value-driven*: you have a wish to contribute to financial, ecological, and social sustainability.

The minor is open to all third-year bachelor students of the three universities. Students may choose between a minor of 15 EC (courses in block I) and a minor of 30 EC (courses in blocks I+II).

## Setup of the Minor

Language	English
Type of programme	Full-time
Period	September - end of January
