- 1. BSc students who have a deficit of maximum 15 EC of an appropriate BSc program from TU Delft on August 31, 2021, have access to both tracks of the TU Delft MSc program Science Education and Communication.*
- 2. There are no specific requirements with regard to the courses obtained within the bachelor's programme.*
- 3. A compulsory study planning (in consultation with the academic counsellors) should be delivered before the start of the academic year 2021-2022, ensuring the completion of their BSc programme before Sept. 1, 2022.*

### **MSc AP**

- 1. BSc students who have a deficit of maximum 15 EC of the TU Delft BSc program TN on August 31, 2021, have access to the TU Delft MSc program Applied Physics.*
- 2. BSc students who have a deficit of maximum 15 EC of the TU Delft double degree BSc program TW/TN on August 31, 2021, have access to the TU Delft MSc program Applied Physics.*
- 3. BSc students from the TU Delft double degree BSc program TW/TN that have completed at least half of their BEP and in addition have a deficit of maximum 3 EC on August 31, 2021, have access to the TU Delft MSc program Applied Physics.*
- 4. There are no specific requirements with regard to the courses obtained within the bachelor's programme.*
- 5. A compulsory study planning (in consultation with the academic counsellors) should be delivered before the start of the academic year 2021-2022, ensuring the completion of their BSc programme before Sept. 1, 2022.*

### **MSc NB**

- 1. BSc students who have a deficit of maximum 15 EC of the TU Delft – EUR joint degree BSc program Nanobiology on August 31, 2021, have access to the TU Delft – EUR joint degree MSc program Nanobiology.*
- 2. BSc students from the TU Delft – EUR joint degree BSc program Nanobiology who have started but not yet completed their BEP and have no other deficit on August 31, 2021, have access to the TU*

*Delft – EUR joint degree MSc program Nanobiology if they are judged to be able to complete their BEP in Q1 of 2021-2022.*

*3. There are no specific requirements with regard to the courses obtained within the bachelor's programme.*

*4. A compulsory study planning (in consultation with the academic counsellors) should be delivered before the start of the academic year 2021-2022, ensuring the completion of their BSc programme before Sept. 1, 2022.*

#### **MSc-CHemE**

*1. BSc students who have a deficit of maximum 15 EC of the TU Delft/U Leiden joint degree BSc program MST on August 31, 2020, and that fulfil the requirements under item 2, have access to the TU Delft MSc program ChemE.*

*2 There are requirements for courses of the TU Delft/U Leiden joint degree BSc program MST that should be successfully finished before September 1<sup>st</sup> 2021:*

*i. For the Product track: Physical Transport Phenomena (4052FYSTRY) and Physical Chemistry and Kinetics (4052FYSCKY)*

*ii. For the Process track: Physical Transport Phenomena (4052FYSTRY) and Chemical Reactor Engineering (4052CHREKY)*

*3 A compulsory study planning (in consultation with the academic counsellors) should be delivered before the start of the academic year 2021-2022, ensuring the completion of their BSc programme before Sept. 1, 2022.*
